

ABSTRACT

A SEARCHABLE PERSONAL BROWSING HISTORY

A system, method and program product for creating a searchable personal browsing history. In response to a user request to obtain a web page from the Internet, metadata and textual data are automatically extracted from the web page. Then, the extracted metadata and textual data are indexed and stored. Subsequently, the stored metadata and textual data are displayed in categories based on the indexing, to enable searching of the displayed categories of metadata and textual data.
